Best Practices and Innovation in Census and Statistics

Friday, October 27, 2023 2:50 PM (20 minutes)

In this session, we will focus on best practices and innovation across Census and the data lifecycle. GIS can be used to improve accuracy and create efficiencies across the statistical business process. Modern Statistical organizations are now leveraging GIS for planning, data collection, operations management, analysis, visualization and dissemination. We will speak to Spatial Data infrastructures and Esri's new SDMX integration as well as share examples from around the globe where GIS is making a difference for decision making at the local level.
